

WEEK 4: September 18th

Creek Critters

Nature Center

Ages 10 - 14

Join us this week as we explore Steele Creek! We will be talking about why our waterways are important and what we can do to protect them. Students will conduct their own research by doing a macroinvertebrate count in the creek. This, along with other tests we will perform, can help us determine the water quality on the Greenway. We are sure to find some awesome insects growing up underwater, and maybe even some crayfish, salamanders or water snakes!
