

WEEK 6: October 2nd

Herpetology

Adventure Center

Ages 10 - 14

Herp! Herp! Hooray! This week will be joined by a graduate student from Winthrop University who will be talking to us about animal and habitat conservation as well as discussing her in progress research project that is taking place on the Greenway. We will do field searches looking for reptiles, measuring and recording data on any animals we find. We also have a trick up our sleeves... radio telemetry! We will use this equipment to find our tagged box turtle friends in the woods!
